Avonbourne Canteen Extension

Project Profile

Introduction

Bennington Green were involved in the project from inception to completion, having originally been involved in the preparation of the feasibility study and the funding application.

The project comprised the new-build traditional construction of an extension to the canteen facility providing 140 extra seating spaces for students.

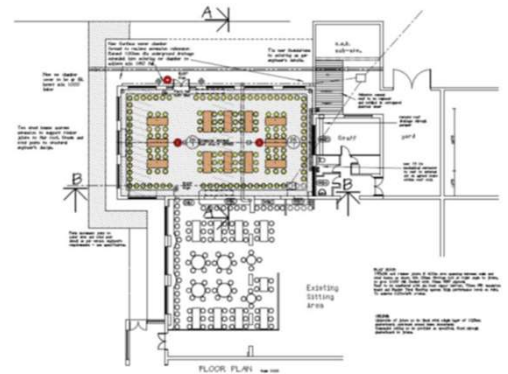

Our Approach

Following the preparation of the feasibility study and the school securing their funding Bennington Green provided procurement advice to enable the school to make an informed decision regarding their preferred means of delivering the project.

Bennington Green were instructed to prepare a detailed tender package for traditional contractor procurement and hence a full preliminaries, materials specification, and scope of works document was prepared to ensure the required quality was achieved and to allow a comprehensive review of the tendering contractors.

Bennington Green also undertook the Planning Application and Building Regulation submissions and negotiated their discharges.

Bennington Green provided full CDM Coordinator services for the project whilst providing guidance to the School in their role as 'Client' to ensure full compliance with the CDM regulations.
