Mill Reef House

Project Profile

Introduction

Initial works comprised the internal modernization of a Second Floor Office wing in readiness to offer for Lease. The works incorporated removal of a safe vault and general uplift to the ceilings, walls and floor finishes.

External works then proceeded to uplift the Front elevation and entrance location with a render application and canopy renewal scheme. Finally, replacement of the South Wings ground floor window units was completed..

The Construction

The works were undertaken in line with the Clients.

Perspectives and colour schemes on a phased approach to freshen up the building.

Our Approach

BGL provided traditional Contract Administration tender packages to appoint a locally based Contractor to undertake elements of the works to accommodate the needs of the existing building users.
